

Instructions:

1. Glue this entire sheet to a piece of heavy card paper then cut out both pieces.
2. Cut a neat hole at the centre of the protractor and the holes on the left and right of second piece.
3. Fold each piece in $\frac{1}{2}$, and glue the "gun" section together. Cut the "viewing window" out of the 2nd piece.
4. Attach the 2nd piece to gun section using the holes to form a hinge so that it swings freely. You can use a small piece of string, wire or a tack for this purpose.
